

## Illusionist automation console

Illusionist offers intuitive operation and complete network functionality, combining the capability and quality associated with our other control consoles with a highly competitive price.

Venues ideal for Illusionist include but are not limited to: theaters, school auditoria, multi-purpose venues, film studios and television studios. Applications in which Illusionist can be employed include but are not limited to: scenery battens, point hoists, curtain tracks, revolves, stage trucks, stage lifts, and performer flying.

Full 3D graphical simulation of cues in virtual mode complements the desk's standard features, such as blind cue plotting. This allows shows to be plotted and viewed in simulation before the scenery is built, saving valuable technical time on stage. All show data may be viewed on a single external monitor, while the option of an additional monitor allows for easier viewing of a large number of axes.

eChameleon embedded software, a common platform across our consoles, has more functionality but is easier to use. This ensures that Illusionist can control the most complicated of performances every night but is not daunting to a less experienced user running a simpler show.

Illusionist uses Windows® Embedded on a solid state drive for enhanced reliability.

### Key features

- Plotting by speed or time
- Operator speed override
- Graphical and text based views
- Locked, safe and safe on demand groups supported
- 3D plotting tools and “teach and learn”
- Cue reverse and reset to state commands
- Capacity to control hundreds of axes with unlimited cues
- 3 playbacks
- Dead man's handle
- 17" LCD screen as standard (dual screen option)
- Solid state hard drive
- 115/230V AC ~ 50/60Hz supply voltage
- Internal DVD RW and optional rack mounting rails
- OS - Windows® Embedded Standard
