

PC Wing compact training and programming desk

PC Wing is Stage Technologies latest compact training and programming tool, designed with versatility and simplicity in mind. Connecting over USB and running on next-generation eChameleon software, PC Wing provides a dedicated Acrobat/Illusionist keyboard, 3 playbacks, a dead man's handle and an emergency stop button.

As a training platform, the console enables drama students to familiarise themselves with the latest automation applications, and venues to provide in-house instruction for their staff in state-of-the-art technology. With the wing, trainees can work first hand on the same control interface used in some of the live performance industry's most popular control desks.

Experienced operators will find the wing invaluable for offline plotting of new shows, or for revisiting previous repertory shows to recall technical or design details. PC Wing can help to streamline the automation team's time by functioning as an alternative programming desk for setting up presets or cues. It is also a useful addition to a theatre's technical department (especially those on tight first-show deadlines) as it enables staff to become fluent with desk operation and software functionality during the manufacturing and installation period before the completed automation system is live.

While the PC Wing was designed primarily for offline applications it can also be used for data backup on a live system. In addition to its many other uses, the PC Wing can also be kept in reserve as a show-saving emergency secondary desk.

Key features

- Plotting by speed or time
- Operator speed override
- Graphical and text based views
- Locked, safe and safe on demand groups supported
- 3D plotting tools
- Cue reverse and reset to state commands
- 3 playbacks
- Dead man's handle
- Single USB connection
- Voltage 110/230V ac 50/60Hz autosensing 50W max
- Lightweight - only 5.5 kg
- OS - Windows® 7 / Windows® XP Professional
